

EcoRoute Agent — Lean Canvas

AI-Driven Supply Chain Sustainability

PROBLEM High fuel costs for local delivery. Inventory waste due to over-ordering. Complicated green compliance.	SOLUTION Python agentic framework for automatic route and stock optimization.	UNIQUE VALUE PROPOSITION Low-code, automated sustainability optimization designed specifically for SMEs.	UNFAIR ADVANTAGE Open-source, modular agent design that integrates seamlessly with existing Excel/CSV data.	CUSTOMER SEGMENTS Local e-commerce businesses. Independent grocery/meal-prep services. Boutique retailers.
EXISTING ALTERNATIVES Enterprise software (SAP/Oracle) — too expensive. Manual planning in Excel.	KEY METRICS % reduction in carbon emissions. % decrease in inventory waste. Delivery time efficiency.	HIGH-LEVEL CONCEPT <i>Brains for your supply chain: agents that think, route, and save.</i>	CHANNELS GitHub open-source community. Direct outreach via LinkedIn. Tech blogs/Medium.	EARLY ADOPTERS Tech-savvy local business owners. Eco-conscious D2C brands.
COST STRUCTURE API usage fees (Maps/LLMs). Cloud hosting (AWS/Google Cloud).		REVENUE STREAMS Tiered SaaS subscription for the UI dashboard. Custom agent integration consulting.
